

Mailtrap.io SMTP settings

Here are the settings to use in [Mailtrap.io](#) if you want to capture all emails sent from Moodle to a sandbox area (e.g. in test and development environments):

```
$CFG->smtphosts = 'smtp.mailtrap.io:2525';  
$CFG->smtpsecure = 'tls';  
$CFG->smtpuser = '<username>';  
$CFG->smtp pass = '<password>';
```

You can also change these in under Site administration > Server > Email > Outgoing mail configuration.

To find your Mailtrap.io username and password visit your inbox, edit the settings (settings cog) and show your credentials.
